ABOUT

For the last years I have been working in a different IT role . I have been responsible for designing, building, testing and supporting applications. Being a key member of my existing team means that I have been put in charge of providing coding and analysis relative to assignments, and performing unit testing on applicable code. I consider myself an expert at resolving application defects, and at testing, debugging, and refining software to produce the required product.

On a personal level I have the ability to stay organized and on top of my work at all times. When I started my full-time studies, I started working immediately. In addition to this I am constantly seeking to improve my skills and am fully aware of the latest developments in the world of Java.

Right now I would like to work for a company that has an environment geared towards performance, provides attractive career opportunities, and has an open corporate culture that values and rewards the contributions of its staff.
